Location: South Africa (Remote/On-site/Hybrid)

PROFESSIONAL SUMMARY

Full-stack Software Engineer with over half a decade of professional experience, 6 years educational experience, and over 2 decades of technical IT experience. I build web applications using Python, Django, React and Vue.js. I work with cloud systems like AWS, Docker, and Kubernetes. I have experience in fintech, network setup, and AI training. I have helped companies reduce deployment time by 35% and keep systems running 99.9% of the time. I am looking for senior engineering roles where I can use my full-stack and cloud skills to solve real world problems.

SKILLS

TECHNICAL PROFICIENCIES

Backend Development: Python (Django), Java, C++, C#, Node.js, REST APIs, Microservices.

Frontend Development: JavaScript, React.js, Vue.js, HTML5, CSS3, Responsive Web Development.

Database Management: PostgreSQL, MySQL, SQL Server, SQLite, MongoDB.

Cloud & DevOps: AWS (EC2, RDS, S3), Google Cloud, Digital Ocean, Terraform, Docker, Kubernetes, CI/CD (GitHub Actions), Monitoring (Prometheus, Grafana).

Networking: TCP/IP, DNS, DHCP, VPN, Firewalls, HTTP/HTTPS, SSL/TLS.

Security: OAuth2, MFA, Security Hardening, Backup & Recovery.

Operating Systems: Linux (Ubuntu, Debian), Windows Server, PowerShell, Bash Scripting.

Other Skills: AI Model Training, Machine Learning, Big Data, Git, Agile, JIRA

Soft Skills: Leadership, Teamwork, Problem Solving, Communication, Project Management, Mentoring, and Career Coaching.

EDUCATION SKILLS:

University: Advanced Mathematics A1 & A2, Introduction to Computer Systems, C++ Programming, Comprehensive Chinese (1, 2, 3, 4) , Art of Communication, College Physics A & B, Java (OOP), Discreet Mathematics, Probability Theory and Statistics, Data Structure and Algorithm, Linear Algebra A & B, Principles of Computer Organizations, Computer Networks, The Principles of Operating Systems, Human-Computer Interaction, Practice of Software Engineering Projects, Database Systems, Principles of Compiler, Software Engineering, Artificial Intelligence, Windows Programming, E-Commerce, Software Testing Technology, Information Security, UML and Software Modeling, Web Application and Development, Digital Image Processing, Linux Principles and Application, XML and XML Applications, Big Data Processing and Analysis, Cloud Computing.

Dissertation: *Natural Language Processing – Machine Learning*

High School: Mathematics, Physical Science, Consumer Studies, Life Science, Life Orientation, English (Home Language), Afrikaans (1st Additional Language).

PROFESSIONAL EXPERIENCE

PROGRAMMER/DEVELOPER (AI TRAINING)

Aligner + Labelbox | Remote | **2026 – Present**
AI Training: Using programming expertise to train and evaluate generative AI models, ensuring the information the models generate is reliable and relevant.

- Train AI models by writing and reviewing code in Python, C, C++, Ruby, and Rust.
- Check code quality and make sure AI follows best practices in software engineering.
- Review 50+ AI code submissions each week and suggest improvements.
- Write clear documentation and use Git to track code changes.
- Built a tool that automates code review, reducing review time by 60%.

Key Results: Improved AI model output quality by 40%.

SOFTWARE ENGINEER

Grind Reel | Remote | **2023 – 2025**

- Built web applications used by 10,000+ active users each month.
- Used PostgreSQL for data storage and AWS for cloud hosting.
- Created REST APIs with Python and Django, handling 5000+ requests at the same time.
- Built user interfaces with React.js and Vue.js, making pages load 45% faster.

- Set up CI/CD pipeline with GitHub Actions, Docker, and Kubernetes, moving from weekly to daily deployments.
- Reduced deployment failures by 70% through better testing and automation.
- Made system more reliable, reaching 99.9% uptime.
- Lowered cloud costs by 30% by using auto-scaling.
- Worked with product, design, and QA teams to deliver 12 major features.
- Added payment systems and secure login (OAuth2) following security rules.
- Set up monitoring tools (Prometheus, Grafana) to catch problems faster.

  Key Result: Changed one large system into smaller services (microservice architecture), supporting 50,000+ users at peak times. Migrated the database from SQLite to PostgreSQL in 1 week, which improved the load-balancing and resulted in 30% faster database queries. Improved system reliability and reduced cloud costs.

ASSISTANT NETWORK ENGINEER

Huawei Technologies | On-site | **2021 – 2023**

Software Testing Engineer (2023)

- Wrote and ran tests for a subscriber carrier network, increasing test coverage from 45% to 92%.
- Reduced production bugs by 55%.
- Automated manual testing with Postman and SoapUI, cutting testing time form 3 days to 8 hours.
- Documented test cases and results, improving knowledge sharing within the team.

Technical Engineer (2022)

- Setup and maintained as subscriber carrier network database cloud, improving uptime from 95% to 99.9%.
- Configured routers, switches, and firewalls, improving network performance by 30%.
- Monitored network traffic and fixed issues quickly, reducing downtime by 40%.
- Worked with cross-functional teams to implement new features and upgrades, improving customer satisfaction by 25%.

Digital Support Engineer (2022)

- Improved user interface/user experience for 5000+ daily users, increasing customer satisfaction by 30%.
- Resolved 150+ support tickets each month, fixing problems in 4 hours on average.
- Built automated onboarding, cutting user setup time from 2 hours to 15 minutes.

Fintech Software Engineer (2021)

- Built payment gateway systems processing $5M+ monthly transactions with 99.95% success rate.
- added secure login with OAuth2, MFA, and encryption, improving security by 40% and reducing security incidents by 90%.
- Created a real-time transaction monitoring dashboard with Python and MongoDB, detecting fraud within 2 seconds.

Assistant Network Engineer (2021)

- Set up and maintained network systems (DNS, DHCP, VPN, firewalls) for 500+ users across 5 offices.
- Added security tools (fail2ban, SSL/TLS), reducing security breaches by 85%.
- Kept network running 99.98% of the time.
- Used Wireshark to troubleshoot network problems 50% faster.

Key Results: Promoted through 5 engineering roles in 2 years, with a 10% salary increase.

EARLY CAREER & FREELANCE WORK (2001 – 2021)

Before my professional education and formal jobs, I worked independently for 15+ years in:

- Software development consulting for small businesses and startups.
- System setup and network support for schools and non-profit organizations
- Database management and IT support for finance, education, and retail clients
- Contributing to open-source projects like Django, React, and Kubernetes.
- Teaching and mentoring new developers through community workshops.

This early experience gives me deep knowledge of how systems work and helps me solve complex problems.

EDUCATION

BACHELOR OF COMPUTER ENGINEERING IN SOFTWARE ENGINERING

Wuhan University | Wuhan, China | **2016 – 2020**

- GPA: 3.0/4.0 | Graduated with Honors
- Key subjects: Data Structures, Algorithms, Database Systems, Artificial Intelligence, Cloud Computing, Big Data, Linux, Computer Networks, Software Engineering.
- Final project: National Language Processing – Machine Learning (89% accuracy with Python and TensorFlow)

- Led a 12-person team to build a healthcare management system, winning “The Best Project” award.

CHINESE LANGUAGE PROFICIENCY (HSK Level 4)

Wuyi University | Wuyishan, China | **2014 – 2016**

- Business-level and Major-level Chinese for work and client communication

SENIOR MANAGEMENT SERVICE Pre-Entry (Public)

National School of Government | South Africa | **2025 – 2026**

- Completed 3 comprehensive modules: Citizenship, Public Administration, Ethical Leadership.

NATIONA SENIOR CERTIFICATE

Brebner High School | Bloemfontein, South Africa | **2008 – 2012**

Subjects: Mathematics, Physics Science, Consumer Studies, Life Sciences, English, Afrikaans

---

PROJECTS

Daxter – Accountant Data Aggregation Dashboard

- Built a platform that collects data from 20+ accounting systems.
- Used Python, Django, React, and PostgreSQL
- Reduced report generation from 10 minutes to 30 seconds
- Supports 500+ accountants during tax season
- GitHub: github.com/mepthamotaung/daxter

Youcipe – **Recipe Sharing Website**

- Built a recipe sharing platform with 2000+ monthly visitors
- Used Vue.js, Django, and PostgreSQL, Nginx, Gunicorn
- Added image uploads, search, and user login
- Deployed on a Linux VPS with Docker and GitHub actions
- Live: https://youcipe.com/

Pixels – **Image Processing Tool**

- Built an image processing tool that handles 10 000+ pixel operations per second

- Used Python, JavaScript, Figma, Vite + Vue, PostgreSQL, HTML, CSS, JavaScript, SQLite3
- Processes 1000+ images daily with sub-second speed
- GitHub: https://github.com/mpethamotaung/Image-Processing

CERTIFICATIONS

- **AWS Certified Solutions Architect** (In Progress)
- **Certified Kubernetes Administrator** (In Progress)
- **100 Days of Python** (In Progress)
- **FNB App Academy + Python + UJ Business School** (In Progress)
- **HSK Level 4 – Chinese Language** (2016)

LANGUAGES

- **English:** Native
- **Afrikaans:** Working knowledge
- **Mandarin Chinese:** Professional level (HSK 4)
- **Southern Sesotho & Setswana:** Native
- **isiZulu:** Advanced
